

Prostate Health for Men Over 40

Are you bothered by urinary symptoms? Take this test—you may have BPH.

BPH (benign prostatic hyperplasia) is a noncancerous enlargement of the prostate that occurs in many men over the age of 40.

Use this form to assess your symptoms, and share your results with your doctor.

To use this symptom scorecard: Circle one number in each line and add up all the circled numbers to get the total score. The total runs from 0 to 35 points with higher scores indicating more severe symptoms. Scores less than seven are considered mild and generally do not warrant treatment.
